AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

1-79. (Canceled)

80. (Original) An entry needle comprising:

a first assembly comprising,

a housing;

a stylet extending into the housing and biased towards a distal end of the entry needle; and

a hub adjacent the housing at a proximal end of the entry needle, the hub in connection with the stylet; and

a second assembly comprising a cannula surrounding the stylet, wherein the first assembly and the second assembly seal together and are separable.

- 81. (Previously presented) The entry needle of claim 80 wherein the hub is movable from a first position to a second position, the hub in the first position indicating that the entry needle is impeded by a tissue and the hub in the second position indicating that the entry needle is substantially unimpeded by the tissue.
- 82. (Previously presented) The entry needle of claim 80 wherein the stylet includes a blunt edge at a distal end of the stylet.

- 83. (Previously presented) The entry needle of claim 80 wherein the cannula includes an angled edge at a distal end of the cannula.
- 84. (Previously presented) The entry needle of claim 80 wherein the stylet includes an angled edge at a distal end of the stylet.
- 85. (Previously presented) The entry needle of claim 80 wherein the cannula includes a blunt edge at a distal end of the cannula.
- 86. (Previously presented) The entry needle of claim 80 further comprising a connector connected with the cannula for attaching a medical device to the second assembly.
- 87. (Previously presented) The entry needle of claim 80 wherein the first assembly further comprises a spring that biases the stylet.
- 88. (Previously presented) The entry needle of claim 87 wherein the stylet comprises an extension that contacts the spring.
- 89. (Previously presented) The entry needle of claim 80 wherein the cannula comprises a connector for connecting together the first assembly and the second assembly.

- 90. (Previously presented) The entry needle of claim 86 wherein the medical device comprises a syringe.
- 91. (Previously presented) The entry needle of claim 80 wherein the cannula is capable of receiving a guidewire.
- 92. (New) The entry needle of claim 81 wherein the stylet is fully retracted into the cannula when the hub is in the first position.
- 93. (New) The entry needle of claim 81 wherein the stylet is partially retracted into the cannula when the hub is in the first position.
- 94. (New) The entry needle of claim 87 wherein the spring is enclosed within the housing.
- 95. (New) The entry needle of claim 94 wherein a proximal end of the spring contacts a proximal end of the housing and a distal end of the spring contacts an extension connected to the stylet.
- 96. (New) The entry needle of claim 88 wherein the extension encircles a portion of the stylet.

- 97. (New) The entry needle of claim 81 wherein the first assembly further comprises a spring that biases the stylet and hub such that the hub is biased toward the second position.
- 98. (New) The entry needle of claim 97 wherein the spring is in a compressed state when the hub is in the first position and a decompressed state when the hub is in the second position.
- 99. (New) The entry needle of claim 87 wherein the spring surrounds a portion of the stylet.
